

REMOTE MICROPHONE Model 61-95039

Application:

The 61-95039 provides a second transmitting location for a mobile 2-way radio. Used in conjunction with the external speaker commonly installed on work vehicles, it is no longer necessary to return to the vehicle's cab to make a radio call.

- The Remote Microphone enables the user to transmit over a 2-way radio from a remote location.
- The Remote Microphone is ideal for use on work trucks. With the Remote Microphone mounted at the rear of the truck, the crew has access to the radio without returning to the cab. This increases crew efficiency and provides added safety when the cab is in those difficult to reach places, such as on railroad bridges.
- The Remote Microphone can also be used for land-based installations, allowing the user access to the radio as needed.

Features:

- Built into a waterproof, rugged, all-steel "NEMA 4" enclosure, measuring 8" x 6" x 4".
- Provided with 30 feet of cable to enable the user to interface the Remote Microphone to the mobile radio.
- Provision for padlock is included.
- Choice of two microphones:
 - With DTMF touchpad
 - Without DTMF touchpad
- "Transmit" LED lights when microphone PTT switch is actuated.
- Quick-release latches on cover.
- The Remote Microphone provides isolation of the microphone when not in use to prevent loading the radio's microphone.

Ordering Reference:

- 61-95039A Remote Microphone with DTMF Microphone
- 61-95039B Remote Microphone with non-DTMF Microphone
